

# HORIZON

## UPGRADE PRICE SCHEDULE

---

The Horizon Software Price Schedule is very easy to understand.

- Basic Software comes bundled with the hardware you purchase.
- Additional channels of Basic Software costs \$2 per channel.
- Silver Software costs \$1 per channel over Basic Software.
- Gold Software costs \$2 per channel over Basic Software (or \$1 per channel over Silver Software).
- Digital I/O (contact closures, button stations, etc.) cost \$10 per I/O point.

Sorry, but it really is that simple. There are only three other things you need to know.

- All channels in the system must be at the same software level (i.e., you can't upgrade 20 channels to Gold Software for that one Cyberlight).
- All Software Upgrades are sold in blocks of 512 channels.
- All Digital I/O is sold in blocks of 8 I/O points.

At the risk of insulting your intelligence, here are a few examples:

Upgrade a Parallel Interface with 512 channels from Basic to Silver	\$512
Upgrade a Parallel Interface with 512 channels from Basic to Gold	\$1024
Upgrade an Ethernet Node with 1024 channels from Basic to Silver	\$1024
Upgrade an Ethernet Node with 1024 channels from Basic to Gold	\$2048
Add software support for 8 Digital I/O (or an 8-button wall station)	\$80

If you're ready to order a Software Upgrade with your credit card, then jump right to our Online ordering page and you can have those new Horizon features in minutes!

**Note that all prices are for Software only! Additional Hardware may be required and must be purchased separately.**
