ETS-LDI TRADESHOW RECOGNIZES THE MARQUEE® ILC

Lighting Control Console Receives Honorable Mention

Dallas, TX - November 18, 2005 - On Saturday, November 12, 2005, the ETS-LDI Tradeshow held its annual Product of the Year award ceremony honoring the best in lighting and sound technology. At the ceremony, the Marquee® ILC lighting control console, by Entertainment Technology, was awarded an Honorable Mention for Lighting Product of the Year.

“We are very pleased to have been awarded an Honorable Mention by the voting members of the ETS-LDI Tradeshow,” stated Alan Keen, Entertainment Technology Product Marketing Manager. “With all of the outstanding products that were nominated, it is indeed an honor to receive this recognition.”

With software designed by Horizon Control Inc., the Marquee ILC is a true last-action tracking console that can easily incorporate programming for both automated and conventional lighting fixtures. Now with the recently released software version 3.0, the Marquee ILC is complete with an Effects Editor, Independent Attribute Timing, Fanning Tool, and Touch Screen Support features.

“Rather than showing the console by showcasing buttons and screens, we show people their lights moving in ways they never thought possible. So when you add together the value of the console with the performance of the technology, that's the true power of the Marquee ILC,” stated Robert Bell, Horizon Control Product Manager.

Along with allowing the programmer to build their own effects on to any lighting attribute, the Effects Editor includes pre-defined moving light effects. The Independent Attribute Timing gives programmers the ability to add unlimited cue dynamics on every attribute of every fixture in every cue. The Fanning Tool facilitates the even adjustment of attribute values and timing to quickly give a lighting rig symmetry and fluid cue movements. And, the added Touch Screen Support utilizes Marquee's graphical user interface giving programmers direct interactive contact with the software.
