

Marquee Version 3.4.11 Released

New Features

- Record Live option added which does a Record Cue List State then Unblocks any redundant data. This feature allows you to goto a cue and record it as another cue without doing it in two steps as was necessary in previous releases.
- The Fixture Grid will automatically scroll to selected fixtures.
- Many new fixtures added to the fixture library (now 433 and growing weekly - send in any requests to support@horizoncontrol.com)

Bug Fixes

- When running in architectural applications, very very long sessions (over a month) could cause a crash.
- Deleting of multiple looks in succession.
- Numerous issues resolved regarding system stability, particularly exacerbated by large shows with long editing sessions

“The release of Marquee 3.4.11 demonstrates Horizon Control's commitment to bettering the Marquee operating systems on an on-going bases. A great deal of field testing has helped make this the most stable version to date.” - **Robert Bell (HCI Product Manager)**
